## Medical X-Ray 2D-Radiography Equipment :Market Shares, Strategies, and Forecasts, Worldwide, 2015 to 2020

---

Half the cancers worldwide are the result of medical radiation. New x-ray equipment lowers the radiation dose significantly. Digital units are set to completely replace that portion of the installed base that is analog. New digital 2D X-Ray equipment gives significantly less radiation than analog units in the installed base and provides better visualization while protecting the patient during diagnostic and therapeutic procedures.
