

Chinese Oxygen Concentrators: -- Markets Reach \$2.5 Billion By 2023

LEXINGTON, Massachusetts (September 20, 2017) – WinterGreen Research announces that it has published a new study Chinese Oxygen Concentrators: Market Shares, Strategy, and Forecasts, Worldwide, 2017 to 2023. The 2017 study has 343 pages, 147 tables and figures. Chinese markets are poised to achieve continuing growth as the air pollution in China and aging population needs portable and homecare oxygen treatment.

Recreational oxygen and medical oxygen are sold in China and Chinese vendors are seeking to enter worldwide markets. The professional athletes in China use recreational oxygen. Amazon sells portable oxygen concentrators and oxygen bars. Sports club members are expected to widely adopt use of recreational oxygen. Oxygen bars are commonly used by singers and movie stars to improve the vocal cord quality and skin tone. All these uses of oxygen are anticipated to grow in China. The O2 is the same in recreational oxygen as it is in the medical oxygen, the chemical composition is the same. But medical oxygen is delivered under a prescription and used as a medicine, recreational oxygen is used to improve athletic endurance and improve brain functioning.

Older people use supplemental oxygen as they develop dementia and other conditions. Oxygen use by these people is able to improve the quality of the life in a dramatic manner. Portable oxygen devices have become affordable and support a mobile lifestyle that is extended to a broader set of people by use of recreational oxygen selectively, continuing to drive sales of recreational oxygen and oxygen bar concentrator air filtration units.

According to Susan Eustis, lead author of the team that wrote the study, “An oxygen concentrator system is commonly used to manufacture oxygen in higher concentrations than is found in atmospheric air. As more oxygen concentrators are sold into China, economies of scale will bring prices down, building a much larger consumer oxygen market. Because of the ability to provide continuous oxygen the oxygen concentrator units are useful to sicker people and to all patients needing oxygen at night. Major factors driving the market for oxygen concentrators include its ability to provide oxygen under all circumstances. The Chinese and worldwide aging population is a market factor. An increase in the number of people with COPD and other respiratory diseases.”

China Oxygen Concentrator Market Forecasts

Home oxygen therapy has spread rapidly in China with the increase in asthma from air pollution. Health insurance has begun covering oxygen treatments. Oxygen concentrator markets in China and for Chinese vendors worldwide at \$178 million in 2016 are set to become a \$2.5 billion market in 2023. Steady intense growth is anticipated because of air pollution in China. The deleterious effects of noxious chemicals and toxins in the air are harming people as they go about their daily life.

WinterGreen Research is an independent research organization funded by the sale of market research studies all over the world and by the implementation of ROI models that are used to calculate the total cost of ownership of equipment, services, and software. The company has 35 distributors worldwide, including Global Information Info Shop, Market Research.com, Research and Markets, electronics.ca, Bloomberg, and Thompson Financial.

WinterGreen Research is positioned to help customers facing challenges that define the modern enterprises. The increasingly global nature of science, technology and engineering is a reflection of the implementation of the globally integrated enterprise. Customers trust wintergreen research to work alongside them to ensure the success of the participation in a particular market segment.

WinterGreen Research supports various market segment programs; provides trusted technical services to the marketing departments. It carries out accurate market share and forecast analysis services for a range of commercial and government customers globally. These are all vital market research support solutions requiring trust and integrity.
